1. After listening to the story *365 Penguins*, solve the following problem:

January has 31 days. At the end of January, there were thirty-one penguins in the house. If penguins continued to arrive at this rate, how many penguins would there be at the end of March? Show and explain your thinking.

2. **Challenge:** How many penguins would there be in the house on the last day of each month, from January to December. Show and explain your thinking.
1. After listening to the story *365 Penguins*, solve the following problem:

   Each penguin ate 2.5 pounds of fish per day. A pound of fish cost 3 dollars. Create a table to show the daily cost of feeding the penguins in January. What was the total cost of fish for January?

2. By the time there were 200 penguins, how much did it cost to feed them? Show and explain your thinking.
