

# Counting Collections

**Materials:** various collections of 50 – 300 objects, paper cups and bowls, ten frames

---

1. Work with a partner. Put the objects in your collection into equal groups. Each group must have the same number of objects.
2. Use skip counting to find how many in all.
3. Record your count. Show how many groups you have, how you counted the objects and how many objects in all.
4. How many different ways can you group and count the objects so that none are left over?
5. Repeat with a different collection.
