

Objects in My Desk Line Plot

Materials: rulers, various objects to measure

1. Measure ten objects in your desk to the nearest half-inch. Record your data in a 2-column table.

Object	Length

2. Display your data on a line plot. Draw a horizontal line and determine your scale. Divide the line into equal parts that will hold your scale. Plot your data by placing an X over the correct number for each measurement collected. If a number is repeated place one X above the other. Label the horizontal axis and record the title of the line plot.
3. What was the combined length of all the objects you measured? Show your work.
