

Odd and Even Products

-
1. Work with a partner. Investigate whether the product is even or odd when you multiply the following:
 - a) odd number \times even number
 - b) odd number \times odd number
 - c) even number \times even number
 2. Try at least five pairs of numbers for each investigation.
 3. Record a conjecture for each investigation. Draw an array to prove each conjecture.
 4. When might this information be useful?
