OPERATIONS AND ALGEBRAIC THINKING

USE THE FOUR OPERATIONS WITH WHOLE NUMBERS TO SOLVE PROBLEMS

4.OA.A.1 - Interpret a multiplication equation as a comparison, e.g., interpret $35 = 5 \times 7$ as a statement that 35 is 5 times as many as 7 and 7 times as many as 5. Represent verbal statements of multiplicative comparisons as multiplication equations.

MULTIPLICATION AS COMPARISON PROBLEMS 10

4.OA.A.2 - Multiply or divide to solve word problems involving multiplicative comparison e.g., by using drawings and equations with a symbol of unknown number to represent the problem, distinguishing multiplicative comparison from additive comparison.

WORD PROBLEMS: MULTIPLICATIVE COMPARISON 14

4.OA.A.3 - Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.

REMAINDER RIDDLE 27

WORD PROBLEMS: MULTISTEP 28

GAIN FAMILIARITY WITH FACTORS AND MULTIPLES

4.OA.B.4 - Find all factor pairs for a whole number in the range of 1-100. Recognize that a whole number is a multiple of each of its factors. Determine whether a given whole number in the range 1-100 is a multiple of a given one-digit number. Determine whether a given whole number in the range of 1-100 is prime or composite.

CLIMB THE FACTOR LADDER 38

PRIME NUMBER INVESTIGATION 39

HOW MANY FACTORS? 40

FINDING ALL FACTORS OF A NUMBER 41

FACTOR RIDDLES 42

GENERATE AND ANALYZE PATTERNS

4.OA.C.5 - Generate a number or shape pattern that follows a given rule. Identify apparent features of the pattern that were not explicit in the rule itself. For example, given the rule "Add 3" and the starting number 1, generate terms in the resulting sequence and observe that the terms appear to alternate between odd and even numbers. Explain informally why the numbers will continue to alternate in this way.

NUMBER AND OPERATIONS IN BASE TEN

GENERALIZE PLACE VALUE UNDERSTANDING FOR MULTI-DIGIT WHOLE NUMBERS

4.NBT.A.1 - Recognize that in a multi-digit whole number, a digit in one place represents ten times what it represents in the place to its right. For example, recognize that $700 \div 70 = 10$ by applying concepts of place value and division.

TRUE OR FALSE? - PLACE VALUE SORT	56
TRUE OR FALSE? - RENAME IT	59
COMPARING DIGITS	62

4.NBT.A.2 - Read and write multi-digit whole numbers using base-ten numerals, number names, and expanded form. Compare two multi-digit numbers based on meanings of the digits in each place, using $>$, $=$, and $<$ symbols to record the results of comparisons.

NUMBER AND OPERATIONS: FRACTIONS

EXTEND UNDERSTANDING OF FRACTION EQUIVALENCE AND ORDERING

4.NF.A.1 - Explain why a fraction a/b is equivalent to a fraction $(n \times a) / (n \times b)$ by using visual fraction models, with attention to how the number and size of the parts differ even though the two fractions themselves are the same size. Use this principle to recognize and generate equivalent fractions.

BUILD A FRACTION WALL	176

EQUIVALENT FRACTION ROLL	181
EQUIVALENT FRACTIONS: SET MODEL	182
EQUIVALENT FRACTIONS ON A MULTIPLICATION GRID	183
EQUIVALENT FRACTIONS: DOMINOES	185

4.NF.A.2 - Compare two fractions with different numerators and different denominators, e.g., by creating common denominators or numerators, or by comparing to a benchmark fraction such as $1/2$. Recognize that comparisons are valid only when the two fractions refer to the same whole. Record the results of comparisons with comparisons with symbols $>$, $=$, or $<$ and justify the conclusions, e.g., by using a visual fraction model.

BIRTHDAY FRACTIONS	192
WHO ATE MORE?	193
SNACK TIME	194

BUILD FRACTIONS FROM UNIT FRACTIONS BY APPLYING AND EXTENDING PREVIOUS UNDERSTANDINGS OF OPERATIONS ON WHOLE NUMBERS

4.NF.B.3 - Understand a fraction a/b with $a > 1$ as a sum of fractions $1/b$.

A. Understand addition and subtraction of fractions as joining and separating parts referring to the same whole.

FRACTION ADDITION WITH PATTERN BLOCKS	195
ADDING LIKE FRACTIONS	196
SUBTRACTING LIKE FRACTIONS	197
PETER'S CHOCOLATE BAR	198
SENSE OR NONSENSE PROBLEMS	199
LITERATURE LINK: PICTURE PIE (V. 2)	200

B. Decompose a fraction into a sum of fraction with the same denominator in more than one way, recording each decomposition by an equation. Justify decompositions, e.g., by using a visual fraction model. Examples: $3/8 = 1/8 + 1/8 + 1/8$; $3/8 = 1/8 + 2/8$; $2 \frac{1}{8} = 1 + 1 + 1/8 = 8/8 + 8/8 + 1/8$

DECOMPOSE A FRACTION	201
PIZZA SHARE	202

C. Add and subtract mixed numbers with like denominators, e.g., by replacing each mixed number with an equivalent fraction, and/or by using properties of operations and the relationship between addition and subtraction.

RENAMING FRACTIONS GREATER THAN ONE	203
ADD AND COMPARE: MIXED NUMBERS	204
SUBTRACT AND COMPARE: MIXED NUMBERS	206
WORD PROBLEMS: ADDING AND SUBTRACTING MIXED NUMBERS	208

D. Solve word problems involving addition and subtraction of fraction referring to the same whole and having like denominators, e.g., by using visual fraction models and equations to represent the problem.

ADD AND COMPARE	212
SUBTRACT AND COMPARE	214
WORD PROBLEMS: ADDING AND SUBTRACTING FRACTIONS	216
WRITE AND SOLVE FRACTIONS	220

4.NF.B.4 - Apply and extend previous understandings of multiplication to multiply a fraction by a whole number.

A. Understand a fraction a/b as a multiple of $1/b$. For example, use a visual fraction model to represent $5/4$ as the product as $5 \times (1/4)$, recording the conclusion by the equation: $5/4 = 5 \times (1/4)$.

MULTIPLY A UNIT FRACTION BY A WHOLE NUMBER	221
--	-----

TRIANGLE FRACTIONS	222
--------------------------	-----

QUADRILATERAL FRACTIONS	223
-------------------------------	-----

B. Understand a multiple of a/b as a multiple of $1/b$ and use this understanding to multiply a fraction by a whole number. For example, use a visual fraction model to express $3 \times (2/5)$ as $6 \times (1/5)$, recognizing this product as $6/5$. (In general, $n \times (a/b) = (n \times a) / b$).

MULTIPLY A FRACTION BY A WHOLE NUMBER	224
---	-----

C. Solve word problems involving multiplication of a fraction by a whole number, e.g., by using visual fraction models and equations to represent the problem. For example, if each person at a party will eat $3/8$ of a pound of roast beef, and there will be 5 people at the party, how many pounds of roast beef will be needed? Between what two whole numbers does your answer lie?

WORD PROBLEMS: MULTIPLY A MIXED NUMBER BY A WHOLE NUMBER	229
--	-----

LITERATURE LINK: FULL HOUSE	233
-----------------------------------	-----

UNDERSTAND DECIMAL NOTATION FOR FRACTIONS AND COMPARE DECIMAL FRACTIONS

4.NF.C.5 - Express a fraction with denominator 10 as an equivalent fraction with denominator 100 and use this technique to add two fractions with respective denominators 10 and 100. For example, express $3/10$ as $30/100$, and add $3/10 + 4/100 = 34/100$.

SUMS OF ONE	234
-------------------	-----

FRACTIONS WITH DENOMINATORS 10 AND 100	237
--	-----

4.NF.C.6 - Use decimal notation for fractions with denominators 10 or 100. For example, rewrite 0.62 as $62/100$; describe a length as 0.62 meters; locate 0.62 on a number line diagram.

FRACTIONS AND DECIMALS	239
------------------------------	-----

4.NF.C.7 - Compare two decimals to hundredths by reasoning about their size. Recognize that comparisons are valid only when the two decimals refer to the same whole. Record the results of comparisons with the symbols $>$, $=$, or $<$, and justify the conclusions, e.g., by using a visual model.

DECIMAL SORT	241
--------------------	-----

COMPARING DECIMALS	242
--------------------------	-----

MEASUREMENT AND DATA

SOLVE PROBLEMS INVOLVING MEASUREMENT AND CONVERSION OF MEASUREMENTS FROM A LARGER UNIT TO A SMALLER UNIT

4.MD.A.1 - Know relative sizes of measurement units within one system of units including km, m, cm; kg, g; lb, oz; l, ml; hr, mins, sec. With a single system of measurement, express measurements in a larger unit in terms of a smaller unit. Record measurement equivalents in a two-column table. For example, know that 1 ft. is 12 times as long as 1 in. Express the

TABLE OF CONTENTS (cont.)

length of a 4ft snake as 48 in. Generate a conversion table for feet and inches listing the number pairs (1, 12), (2, 24), (3, 36).

MAKING A POUND	247
ONE GALLON	248
MEASUREMENT CONCENTRATION (V. 1)	250
MEASUREMENT CONCENTRATION (V. 2)	254
CAPACITY CREATURE	257

4.MD.A.2 - Use the four operations to solve word problems involving distances, intervals of time, liquid volumes, masses of objects, and money, including problems involving simple fractions of decimals, and problems that require expressing measurements given in a large unit in terms of a smaller unit. Represent measurement quantities using diagrams such as number line diagrams that feature a measurement scale.

WORD PROBLEMS: MEASUREMENT CONVERSION	260
---	-----

4.MD.A.3 - Apply the area and perimeter formulas for rectangles in real world and mathematical problems. For example, find the width of a rectangular room given the area of the flooring and the length, by viewing the area formula as a multiplication equation with an unknown factor.

LITERATURE LINK: A DINNER PARTY	264
HOW MANY TABLES?	265
FENCING A GARDEN	266
DESIGNING A ZOO ENCLOSURE	267

REPRESENT AND INTERPRET DATA

4.MD.B.4 - Make a line plot to display a data set of measurements in fractions of a unit ($\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$). Solve problems involving addition and subtraction of fractions by using information presented in line plots. For example, from a line plot find and interpret the difference in length between the longest and shortest specimens in an insect collection.

OBJECTS IN MY DESK LINE PLOT	268
LENGTH OF ANTS LINE PLOT	269

GEOMETRIC MEASUREMENT: UNDERSTAND CONCEPTS OF ANGLE AND MEASURE ANGLES

4.MD.C.5 - Recognize angles as geometric shapes that are formed whenever two rays share a common endpoint, and understand concepts of angle measurement:

A. An angle is measured with reference to a circle with its center at the common endpoint of the rays, by considering the fraction of the circular arc between the points where the two rays intersect the circle. An angle that turns $\frac{1}{360}$ of a circle is called a "one-degree angle," and can be used to measure angles.

B. An angle that turns through n one-degree angles is said to have an angle measure of n degrees.

ANGLES IN CIRCLES	270
-------------------------	-----

4.MD.C.6 - Measure angles in whole-number degrees using a protractor. Sketch angles of specified measure.
